

Global Learning Network

Imagine... interacting with the anchor, while watching the news

Global Education via Technology

CIBT's Global Learning Network ("GLN") is a global hub and spoke model with CIBT's broadcasting studios in Canada and China, the GLN Studio broadcasts western educational content taught by qualified and experienced western instructors to overseas students through video conferencing technology, in real time and interactively. The Global Learning Network has established learning centers around the world supported by local academic partners.

For more information on the GLN of CIBT, please contact:

Using interactive technology to deliver advanced education to students across Asia

Overseas students at our GLN centers have the ability to communicate interactively with GLN teachers in life size video monitors. Like any ordinary classroom, students can have discussions and ask questions with the teacher throughout the class and are further supported by a local in-class instructor at the overseas location.

CIBT's well-established subsidiary schools, Spratt-Shaw College (established in 1903) and King George International College have the experience and proven educational contents to educate students from around the globe using the Global Learning Network.

The world is globalizing and education is following suit.

Through the use of technology and CIBT's international infrastructure, CIBT is in the position to connect the North American education sector to the growing Asian market.

By carefully merging traditional education with modern technological advancements, the GLN model has successfully created a balance between face-to-face delivery and live interactive technology. As a result of efficient delivery of quality western programs to overseas countries, students are able to enjoy an unprecedented educational experience at an affordable cost. Operational cost to expatriate North American teachers to live and teach in Asia is substantially reduced through the use of GLN delivery platform.
